## Project Name

“Teaching and learning microcontrollers via PicBasicPro (PBP) language in VET”

**Project No:**

“2016-1-TR01-KA202-033963”

## THE PROJECT

The project will contribute to the development of professional and key digital competences which are important not only for the microcontrolling specialization but also for other fields, as professional and digital competences are transversal to any field. With the project, VET teachers will be able to update their knowledge and professional competences in the field of microcontrollers and bring them to VET courses and lessons, improving VET curricula and providing VET learners with a better training, more adapted to the needs of the labor market. Besides, the contact with

companies will also set the basis for future cooperation with them in other aspects, such as hosting of apprentices.

### Target Group

- VET teachers, in-company trainers, directors
- the students (and their parents)
- the internship companies and other employers

## THE GOAL

VET teachers directly involved in the project will also benefit of working in an international project, which will develop their interpersonal skills and will help them to contribute to the internationalization strategies of their VET centres. They will also get insight of different VET systems, VET curricula in microcontrolling and learning-teaching methodologies used by other VET centres in Europe which will increase enormously their professional abilities.
